**Re: Groundwater Well Sampling Results**

Dear (b) (6)

This letter provides the results for the water sample(s) collected from your groundwater well on 8/8/2015 (Sample ID (s) = GKMTW01\_080815). The water was submitted to, and analyzed by a private certified laboratory for total metals. The analysis included metals that could be present in water from the Gold King Mine release.

**None of these metals were present in your groundwater above a level of concern.** A laboratory results summary table for your water sample is attached to this letter.

We greatly appreciate your cooperation in the collection process, and thank you for your patience while the sample was analyzed. The EPA will work with the Tribe's Water Quality Program to identify any future sampling needs. If you have any further questions, please contact Deb McKean at (303) 579-4371.

Sincerely,

US Environmental Protection Agency, Region 8
